

 PROFESSIONAL SUMMARY

Full Stack Developer skilled in building scalable web applications and microservices using React.js, Node.js, Express.js, MongoDB, MySQL, Redis, and Apache Kafka. Strong in Data Structures and Algorithms with 1300+ problems solved on LeetCode and GeekForGeeks. Experienced in developing REST APIs and secure backend applications with clean and maintainable code practices.

 ACADEMIC BACKGROUND

B.Tech in Computer Science & Engineering

RGUKT, Srikakulam

2023 – Present

CGPA: 9.0

 TECHNICAL SKILLS

Languages: JavaScript,Python, C++

Frontend: React.js, Redux, Responsive Design

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Apache Kafka, Microservices Architecture

Database: MongoDB, MySQL, Redis

Tools: Git, GitHub, VS Code, Postman, Docker

 PROJECTS

E-Commerce Microservices Platform

Node.js · Express.js · Kafka · MongoDB · MySQL · Redis

- Built a scalable distributed e-commerce platform using microservices architecture with 8 independent services including Auth, Product, Cart, Order, Inventory, Payment, Notification, and API Gateway services.
- Designed an event-driven architecture using Apache Kafka for asynchronous communication between services, enabling order processing, inventory reservation, and notification workflows with loose coupling.
- Implemented backend services using Node.js and Express.js with MongoDB for product and authentication services, MySQL for order and inventory management, and Redis for cart storage, distributed locking, and rate limiting.
- Applied a cache-aside strategy for read-heavy endpoints, with cache invalidation on writes to maintain consistency and reduce database load.
- Developed secure JWT-based authentication, API Gateway routing, and REST APIs, and improved system reliability using asynchronous Kafka-based communication, independent databases per microservice, and distributed locking for concurrent inventory operations.

MediConnect — Healthcare Connectivity Platform

React.js · Node.js · Express.js · MongoDB · JWT

- Built a full-stack healthcare platform enabling patients to search doctors, and explore hospitals and blood bank availability.
- Designed system architecture using a React frontend, Express.js backend, and MongoDB database to manage hospitals, doctors and patient records.
- Implemented secure authentication and role-based access control using JWT for patients, doctors, hospital administrators, and system administrators.
- Developed 50+ REST API endpoints supporting doctor and hospital search with filters (specialization, location, ratings), blood bank information, and user management.

 CODING ACHIEVEMENTS Leetcode · Gfg

- Solved **1,300+ problems** across LeetCode (Global Rank **20,000**) and GeeksforGeeks (Coding Score **900+**).
- Ranked in the **top 9%** of LeetCode users, backed by the **365 Days** consistency badge and **SQL 50** badge.
